

ERP

User & Troubleshooting Guide

Wholesale & Distribution ERP - Simple Operator Handbook

Prepared for end users, supervisors, administrators, purchasing, sales, warehouse, finance, and management users.

Version: 1.0 | Prepared: 12 August 2026

How this guide is different

This is not a developer manual. Each section tells the user where the menu is, what must exist before using it, how it connects to other modules, and what to check when an action does not work.

1. How to Use This Guide

- If you are new: read Sections 2-6 first, then read only the modules you use.
- If something is not working: go directly to Section 8 (Fast Troubleshooting) and the relevant module section.
- If a menu is missing: remember that menus are filtered by your permission and by the company's SaaS plan/features.
- If a record is missing: first confirm the company/tenant, branch, warehouse, status, and your branch access.
- If a transaction cannot continue: check prerequisites such as active master data, document numbering, accounting period, approval status, stock, and permissions.

Golden rule

Do not force a transaction by changing balances or deleting posted records. Find the missing prerequisite or use the correct return/reversal/adjustment workflow.

2. Quick Navigation - Current ERP Sidebar

Menu group / submenu	Menu	What it is for
Menu	Dashboard	Business summary, alerts, recent activity
Administration > Organisation	Company Settings	Company-level settings
Administration > Organisation	Branches	Operating locations / branch control
Administration > Organisation	Warehouses	Stock-holding locations linked to branches
Administration > Organisation	Document Numbering	Automatic document sequences by company or branch
Administration	Exports	Export requests and downloads
Administration > System Operations	Operations Dashboard	Operational health / system checks
Administration > System Operations	Database Backups	Backup records and verification
Administration > System Operations	Failed Jobs	Background job failures
Administration > System Operations	Deployment Preflight	Deployment readiness checks
Administration > System Operations	Production Acceptance	Production acceptance checks
Administration > System Operations	Release Candidates	Release verification
Administration	Notifications	User notifications
Administration	Accounting Periods	Fiscal years and open/closed accounting periods
Administration > Access Control	Users	ERP users
Administration > Access Control	Roles	Roles and permissions
Administration	Audit Logs	Trace important actions
Master Data > Catalogue	Products	Items/services bought/sold/stocked
Master Data > Catalogue	Categories	Product grouping
Master Data > Catalogue	Brands	Product brands
Master Data > Catalogue	Units	Quantity units
Master Data	Suppliers	Vendors used by Procurement/AP
Master Data	Customers	Customers used by Sales/AR
Operations > Procurement	Purchase Orders	Purchase intent and approval
Operations > Procurement	Goods Receipts	Physical receipt of purchased goods
Operations > Procurement	Purchase Returns	Return goods to supplier
Operations > Procurement	Supplier Invoices	Supplier liability / AP source
Operations > Procurement	Supplier Debit Notes	Supplier-side debit/return corrections
Operations > Procurement	Supplier Payments	Pay supplier open items
Operations > Sales	Sales Orders	Customer order
Operations > Sales	Dispatches	Goods leaving warehouse
Operations > Sales	Sales Invoices	Customer receivable
Operations > Sales	Sales Returns	Goods returned by customer
Operations > Sales	Customer Receipts	Money received from customers
Operations > Sales	Customer Credits	Available customer credits
Operations > Sales	Credit Applications	Apply credit to receivable
Operations > Sales	Customer Refunds	Return money to customer
Operations > Sales	AR Adjustments	Authorized receivable corrections
Operations > Treasury	Treasury Dashboard	Cash/bank overview
Operations > Treasury	Transaction Register	Treasury transaction register

Menu group / submenu	Menu	What it is for
Operations > Treasury	Transfers	Move funds between accounts/branches
Operations > Treasury	Adjustments	Authorized treasury corrections
Operations > Treasury	Bank Statements	Import/review bank statement data
Operations > Treasury	Bank Reconciliations	Match ERP and bank transactions
Operations > Inventory	Stock Summary	Current stock
Operations > Inventory	Stock Ledger	Detailed stock movements
Operations > Inventory	Transfers	Move stock between warehouses
Operations > Inventory	Adjustments	Authorized stock corrections
Operations > Inventory	Stock Counts	Physical count workflow
Reports > Accounts Payable	AP Aging	Supplier aging
Reports > Accounts Payable	Supplier Statement	Supplier transaction statement
Reports > Financial Control	Control Dashboard	Financial control checks
Reports > Financial Control	Trial Balance	Debit/credit balances
Reports > Financial Control	Profit and Loss	Income and expenses
Reports > Financial Control	Balance Sheet	Assets, liabilities, equity
Reports > Financial Control	Cash Flow	Cash movement
Reports > Financial Control	Reconciliations	Financial reconciliations
Reports > Management	Executive Dashboard	Management KPI overview
Reports > Management	Budgets	Budget management
Reports > Management	Branch Profitability	Profitability by branch
Reports > Management	Budget vs Actual	Budget performance
Reports > Management	Product Profitability	Profitability by product
Reports > Management	Customer Profitability	Profitability by customer
Reports > Management	Supplier Spend	Supplier spend analysis
Reports > Management	Gross Margin	Gross margin reporting
Reports > Management	Scheduled Reports	Recurring report schedules
Reports > Management	Production Readiness	Management readiness report
Reports > Accounts Receivable	AR Aging	Receivable aging
Reports > Accounts Receivable	Customer Statement	Customer statement
Reports > Accounts Receivable	Open Invoices	Unpaid invoices
Reports > Accounts Receivable	Overdue Invoices	Past-due invoices

Why your sidebar may be shorter

The ERP hides items when your role lacks permission or when the tenant plan does not include the required SaaS feature. A missing menu is not automatically a software error.

3. Recommended Initial Setup

1. Complete Company Settings.
2. Create Branches.
3. Create Warehouses under the correct Branches.
4. Create Users and assign Roles/Permissions and branch access.
5. Create fiscal year/accounting periods and keep the required periods open.
6. Create Document Numbering sequences for every transactional document type you will use. If sequences are branch-specific, create them for each branch.
7. Create Units, Product Categories and Brands.
8. Create Products, then configure Product Branch and Product Warehouse locations where applicable.

9. Create Suppliers and Customers.

10. Start transactional work only after the prerequisites are ready.

Very important for new branches

A newly created branch can exist successfully but still be unable to submit/number transactions until the required branch-specific Document Numbering sequences are configured.

4. Core Concepts Every User Should Understand

Term	Simple meaning
Company / Tenant	Your business data boundary. Data from another tenant must never be mixed.
Branch	Business location / operating unit. Branch access affects what records and options you can see.
Warehouse	Stock-holding location linked to a branch. Stock transactions are warehouse-specific.
Permission	Controls whether you can view/create/update/submit/approve/post/reverse/etc.
SaaS feature	Controls whether a module is available for the tenant at all.
Draft	Editable working document. Usually no final inventory/accounting impact.
Submitted	Sent into approval/review workflow. Some documents allocate their official number at this point.
Approved	Authorized for the next operational step.
Posted	Final inventory/accounting impact has been committed.
Reversed	A formal correcting entry/workflow has been created instead of rewriting history.
Document sequence	Rule that generates official document numbers. Can be company-wide or branch-specific.
Accounting period	Controls whether financial posting is allowed for a date.

5. Document Numbering - One of the Most Important Setup Areas

Item	Details
Menu path	Administration > Organisation > Document Numbering
Why it exists	Generates controlled document numbers such as PO-2026-000001 instead of users inventing numbers.
Scope	Company-wide or Branch-specific.
Key identity	Document Type + scope/branch. The active sequence must match the transaction.
Typical fields	Name, Document Type, Prefix, Suffix, Current Number, Padding, Reset Policy, Status.
When number is allocated	Depends on the workflow. For Purchase Orders, the official number is allocated when submitting the draft if it does not already have one.

5.1 Current document types available for numbering

Document Type	Default prefix example
Purchase Requisition	PR-{YYYYY}-
Request for Quotation	RFQ-{YYYYY}-
Purchase Order	PO-{YYYYY}-
Goods Receipt	GRN-{YYYYY}-
Supplier Invoice	SINV-{YYYYY}-
Purchase Return	PRTN-{YYYYY}-
Sales Quotation	SQ-{YYYYY}-
Sales Order	SO-{YYYYY}-

Document Type	Default prefix example
Delivery Note	DN-{YYYYY}-
Sales Invoice	INV-{YYYYY}-
Sales Return	SRTN-{YYYYY}-
Stock Transfer	ST-{YYYYY}-
Stock Adjustment	SA-{YYYYY}-
Stock Count	SC-{YYYYY}-
Customer Receipt	CR-{YYYYY}-
Customer Credit Application	CCA-{YYYYY}-
Customer Refund	CRF-{YYYYY}-
Customer AR Adjustment	ARA-{YYYYY}-
Supplier Payment	SP-{YYYYY}-
Journal Entry	JE-{YYYYY}-
Debit Note	DBN-{YYYYY}-
Credit Note	CRN-{YYYYY}-

5.2 Example - Purchase Order cannot Submit for Approval

Symptom

The Purchase Order saves as Draft, but Submit for Approval returns: "No active document-number sequence is configured for this document type and branch."

1. Open the Purchase Order and note the selected Branch.
2. Go to Administration > Organisation > Document Numbering.
3. Check for an Active sequence with Document Type = Purchase Order and the same Branch (or a valid company-wide fallback if your setup uses one).
4. If missing, create the sequence. A typical prefix is PO-{YYYYY}-.
5. Save it as Active.
6. Return to the Purchase Order and Submit for Approval again.
7. The ERP should allocate the official number and move the document into the submitted workflow.

Missing Document Numbering - What To Do

6. Products, Branches and Warehouses - Why Items May Be Missing

Important

Creating a Product master record does not always make it immediately usable in every branch/warehouse. Location configuration matters.

1. Create the Product under Master Data > Catalogue > Products.
2. Open the Product > Locations.

3. Add the relevant Branch setting and make it Active.
4. Enable Purchasable for the branch if the product will be purchased.
5. Enable Sellable for the branch if the product will be sold.
6. For stock products, add the Warehouse setting for the correct Branch/Warehouse and keep it Active.
7. When creating a Purchase Order, select the same Branch and Warehouse. Then the product should be available in Order Lines if all other filters are satisfied.

Why a Product May Not Appear in Purchase Order

7. Main End-to-End Workflows

7.1 Procurement

- Supplier is master data used by Purchase Orders, Supplier Invoices, AP and Supplier Payments.
- Purchase Order records intent to buy. It does not increase stock.
- Goods Receipt records physical receipt and can affect inventory when posted/confirmed.
- Supplier Invoice records what is owed and affects Accounts Payable/General Ledger when posted.
- Supplier Payment settles supplier open items.

7.2 Sales

- Customer is master data used by Sales and Accounts Receivable.
- Sales Order records demand.
- Stock Allocation reserves stock.
- Dispatch records goods leaving the warehouse and affects inventory.
- Sales Invoice creates the receivable.
- Customer Receipt settles open receivables.

7.3 Inventory impact

8. Fast Troubleshooting - Check These Before Reporting a Bug

Symptom	First checks
Menu is missing	Check SaaS plan feature, your permission, and whether the submenu has any visible permitted items.
Create/Edit/Approve/Post button is missing	Check permission + document status + branch access + whether the action is allowed in the current workflow.
Record is not visible	Check company/tenant, branch, filters, status, date range, and your branch access.
Product is missing from a Purchase Order	Check Product Active/Purchasable, Product Branch Setting Active/Purchasable, and for stock items the Product Warehouse Setting.
Transaction cannot get a number	Check Administration > Organisation > Document Numbering for an Active matching sequence.
Transaction cannot post for a date	Check Accounting Periods. The date may be in a closed period.
Cannot dispatch / allocate stock	Check Stock Summary, warehouse, existing allocations/reservations, and whether stock is actually available.
Cannot receive against PO	Check PO status. A PO normally needs to be approved/receivable and have outstanding quantity.

Symptom	First checks
Cannot edit	Check status. Posted/final documents often cannot be edited and need return-to-draft, reversal, return, or adjustment instead.
Supplier/customer balance looks wrong	Check invoices, receipts/payments, credits, applications/allocations, returns, refunds and adjustments. Do not manually overwrite balances.
Unexpected 403 / action not authorized	Check role permissions and branch access.
Unexpected empty dropdown	Check master record status, branch/warehouse configuration, workflow status and relevant feature/permission.

When a Menu or Action Button Is Missing

9. Module Reference

How to read each module

Each module below follows the same structure: menu path, purpose, prerequisites, typical user steps, related modules, and common issues.

9.1. Company Settings

Item	Details
Menu path	Administration > Organisation > Company Settings
Purpose	Stores company-level information and operational/accounting defaults.

Before you use it

- You need `company_settings.view`; updates need the appropriate update permission.
- Use only approved company information and base settings.

Typical user steps

1. Open Company Settings.
2. Review company identity/contact/accounting defaults.
3. Change only authorized fields.
4. Save and verify downstream documents/reports if a critical default changed.

Related modules

- Branches inherit company context.
- Document Numbering can use company code tokens.
- Accounting, reports and transaction defaults may depend on company settings.

Common issues / what to check

Wrong default on new transactions

Review company settings and the transaction-specific branch/accounting setup.

Menu missing

Check `company_settings.view` permission.

9.2. Branches

Item	Details
Menu path	Administration > Organisation > Branches
Purpose	Creates and manages operating locations used to scope transactions and access.

Before you use it

- Decide branch codes carefully.
- Know which users should access the branch.

Typical user steps

1. Create Branch.

2. Enter name/code/address/status.
3. Save.
4. Create its Warehouses.
5. Configure Document Numbering for transactional document types used by this branch.
6. Configure Product Branch Settings for products used there.

Related modules

- Warehouses
- Users / branch access
- Document Numbering
- Products > Locations
- Purchasing, Sales, Inventory, Accounting reports

Common issues / what to check

New branch cannot submit transactions

Most often missing branch-specific Document Numbering.

Product not available in branch

Configure Product > Locations > Branch setting.

User cannot see branch records

Check user branch access / access_all permission.

Important notes

- Do not deactivate an active operational branch without checking open transactions.

9.3. Warehouses

Item	Details
Menu path	Administration > Organisation > Warehouses
Purpose	Defines stock-holding locations under a branch.

Before you use it

- Branch must already exist.
- Choose the correct branch before creating warehouse.

Typical user steps

1. Create Warehouse.
2. Assign Branch.
3. Enter name/code/status.
4. Save.
5. Configure Product Warehouse Settings for stock products that should be usable there.

Related modules

- Products > Locations
- Goods Receipts

- Dispatches
- Purchase Returns
- Sales Returns
- Inventory

Common issues / what to check

Warehouse missing from transaction

Check branch match, warehouse status, user branch access and transaction-specific eligibility.

Product missing in warehouse

Configure Product Warehouse Setting and keep it Active.

9.4. Users

Item	Details
Menu path	Administration > Access Control > Users
Purpose	Manages ERP user accounts.

Before you use it

- Tenant/company must exist.
- Define roles and branch access policy.

Typical user steps

1. Create user.
2. Assign role(s).
3. Assign branch access as required.
4. Set user status Active.
5. Issue credentials securely.

Related modules

- Roles
- Branches
- Audit Logs
- Every secured ERP module

Common issues / what to check

User cannot log in

Check user status and credentials.

User logs in but menu is missing

Check role permission + SaaS feature.

User sees wrong branch scope

Review branch access.

9.5. Roles

Item	Details
Menu path	Administration > Access Control > Roles
Purpose	Groups permissions for job responsibilities.

Before you use it

- Define job responsibilities before creating many roles.

Typical user steps

1. Create role.
2. Assign only required permissions.
3. Save.
4. Assign role to users.
5. Retest menus and actions with a representative user.

Related modules

- Users
- All permission-protected modules

Common issues / what to check

Button missing

Role may have view permission but not create/submit/approve/post permission.

Too much access

Remove unnecessary permissions and review branch access separately.

9.6. Accounting Periods

Item	Details
Menu path	Administration > Accounting Periods
Purpose	Controls fiscal years and whether financial posting is allowed for a date.

Before you use it

- Fiscal year structure must be defined.
- Only authorized finance/admin users should close/reopen periods.

Typical user steps

1. Create/generate fiscal year and periods.
2. Keep operational periods Open.
3. Close periods after reconciliation/month-end approval.
4. Reopen only with authorization.

Related modules

- General Ledger
- Supplier Invoices/Payments

- Sales Invoices/Receipts
- Treasury
- Financial Reports

Common issues / what to check

Posting blocked by date

The accounting period may be closed.

Period missing

Fiscal year/period generation may not cover the transaction date.

9.7. Products

Item	Details
Menu path	Master Data > Catalogue > Products
Purpose	Stores products/services and controls whether they can be bought, sold and stocked.

Before you use it

- Create Units first.
- Create Category/Brand as needed.
- Know whether product is stock or service.

Typical user steps

1. Create Product master.
2. Set SKU/name/unit/category/brand/status and purchase/sales properties.
3. Save.
4. Open Product > Locations.
5. Configure Branch setting.
6. For stock product, configure Warehouse setting.

Related modules

- Units
- Categories
- Brands
- Branches
- Warehouses
- Purchase Orders
- Sales Orders
- Inventory
- Profitability reports

Common issues / what to check

Product not in PO

Check main product Active/Purchasable + branch Active/Purchasable + warehouse Active for stock items.

Product not in Sales

Check main Sellable + branch Sellable + appropriate stock/location settings.

Wrong stock unit

Review product Unit; changing units after transactions requires care.

9.8. Categories / Brands / Units

Item	Details
Menu path	Master Data > Catalogue > Categories / Brands / Units
Purpose	Reference data used to classify products and standardize quantity units.

Before you use it

- Search first to avoid duplicates.

Typical user steps

1. Create required reference record.
2. Use consistent code/name.
3. Keep it Active if the module supports status.
4. Select it on Products.

Related modules

- Products
- Purchasing
- Sales
- Inventory reports

Common issues / what to check

Duplicate values

Search before creating.

Cannot delete

The record may already be referenced by products/transactions.

9.9. Suppliers

Item	Details
Menu path	Master Data > Suppliers
Purpose	Stores vendors used by Procurement and Accounts Payable.

Before you use it

- Use a unique supplier code.
- Enter correct contact/tax/payment information.

Typical user steps

1. Create Supplier.
2. Enter code/name/contact/address/status.
3. Save.

4. Use Supplier in Purchase Orders and Supplier Invoices.
5. Review Supplier Statement/AP Aging for balance questions.

Related modules

- Purchase Orders
- Goods Receipts
- Supplier Invoices
- Supplier Payments
- Purchase Returns
- Supplier Debit Notes
- Accounts Payable reports

Common issues / what to check

Supplier missing from PO

Check supplier status and any branch/eligibility filtering.

Balance looks wrong

Review Supplier Invoices, Payments, Debit Notes, Returns and allocations.

Cannot delete

Supplier may already be referenced by transactions.

9.10. Customers

Item	Details
Menu path	Master Data > Customers
Purpose	Stores customers used by Sales and Accounts Receivable.

Before you use it

- Use unique customer code.
- Review credit/accounting details carefully.

Typical user steps

1. Create Customer.
2. Enter code/name/contact/billing/shipping/credit details.
3. Save.
4. Use in Sales Orders and Sales Invoices.
5. Review Customer Statement/AR Aging when needed.

Related modules

- Sales Orders
- Dispatches
- Sales Invoices
- Customer Receipts
- Customer Credits
- Credit Applications
- Refunds
- AR reports

Common issues / what to check

Customer missing from Sales Order

Check customer status and branch/eligibility filtering.

Balance looks wrong

Review invoices, receipts, credits, applications, refunds and adjustments.

9.11. Purchase Orders

Item	Details
Menu path	Operations > Procurement > Purchase Orders
Purpose	Records what the company intends to buy and controls the approval path before receiving.

Before you use it

- Supplier must exist and be active/eligible.
- Branch and receiving Warehouse must be valid.
- Products must be usable for the selected branch/warehouse.
- An active Purchase Order Document Numbering sequence must exist for the branch before Submit for Approval can allocate a number.

Typical user steps

1. Create PO.
2. Select Branch and Warehouse.
3. Select Supplier.
4. Add Order Lines.
5. Save Draft.
6. Review values.
7. Submit for Approval - official document number is allocated if missing.
8. Approve with authorized user.
9. Receive goods through Goods Receipts.

Related modules

- Suppliers
- Products
- Branches/Warehouses
- Document Numbering
- Goods Receipts
- Supplier Invoices
- Purchase Returns
- AP

Common issues / what to check

Submit for Approval not working

Check errors. If document_number is null and error mentions sequence, create active Purchase Order numbering for the same branch.

Product dropdown empty

Check Product + Branch + Warehouse configuration.

Approve button missing

Check PO status = submitted and purchase_orders.approve permission.

Cannot edit

Only valid workflow statuses are editable; approved/received/final states may require return-to-draft or another controlled action.

Important notes

- Purchase Order status typically progresses Draft -> Submitted -> Approved -> Partially Received / Received -> Closed, or Cancelled according to allowed transitions.

9.12. Goods Receipts

Item	Details
Menu path	Operations > Procurement > Goods Receipts
Purpose	Records physical receipt of purchased goods.

Before you use it

- Related Purchase Order should be in a receivable/approved state.
- Receiving Warehouse must be correct.
- Outstanding quantity must remain.

Typical user steps

1. Create/select receipt against PO.
2. Choose correct warehouse.
3. Enter received/accepted quantities.
4. Review differences.
5. Post/confirm according to permissions.

Related modules

- Purchase Orders
- Inventory
- Supplier Invoices
- Purchase Returns

Common issues / what to check

PO not available

PO may not be approved/receivable, may be fully received, or branch/warehouse may not match.

Quantity rejected

Cannot receive beyond allowed outstanding quantity.

Stock not updated

Check whether the Goods Receipt reached its posting/final inventory-impact step.

9.13. Purchase Returns

Item	Details
Menu path	Operations > Procurement > Purchase Returns
Purpose	Returns previously accepted purchased goods to a supplier.

Before you use it

- Returnable quantity must exist from accepted Goods Receipt quantities.

Typical user steps

1. Create return.
2. Select source/eligible receipt lines.
3. Enter return quantities.
4. Submit/approve as required.
5. Post to complete inventory/accounting impact.

Related modules

- Goods Receipts
- Purchase Orders
- Inventory
- Supplier Debit Notes / AP

Common issues / what to check

Line not returnable

Accepted quantity may already be fully returned/reserved for return.

Return quantity rejected

Requested return exceeds available returnable quantity.

9.14. Supplier Invoices

Item	Details
Menu path	Operations > Procurement > Supplier Invoices
Purpose	Records supplier bills and creates AP/GL impact when posted.

Before you use it

- Supplier must exist.
- Relevant PO/GRN should be available when matching is required.
- Accounting period must be open for posting.

Typical user steps

1. Create invoice.
2. Enter supplier reference/date.
3. Match PO/GRN where applicable.
4. Verify quantities/rates/tax/totals.

5. Validate/approve according to workflow.

6. Post.

Related modules

- Suppliers
- Purchase Orders
- Goods Receipts
- Accounts Payable
- General Ledger
- Supplier Payments

Common issues / what to check

Cannot post

Check accounting period, approval status and required matching/validation.

Balance wrong after posting

Review invoice lines, taxes, open items and GL source entry; do not edit posted data directly.

9.15. Supplier Debit Notes

Item	Details
Menu path	Operations > Procurement > Supplier Debit Notes
Purpose	Records authorized supplier-side debit/credit corrections linked to procurement/AP.

Before you use it

- Use only for legitimate supported business reason and source linkage.

Typical user steps

1. Create note.
2. Link supplier/source transactions.
3. Enter lines/amounts.
4. Submit/approve.
5. Post if workflow requires.

Related modules

- Purchase Returns
- Supplier Invoices
- Accounts Payable
- General Ledger

Common issues / what to check

Source transaction not available

Check supplier/branch/status and whether source quantity/value remains eligible.

Cannot post

Check approval and accounting period.

9.16. Supplier Payments

Item	Details
Menu path	Operations > Procurement > Supplier Payments
Purpose	Pays supplier open items and reduces Accounts Payable.

Before you use it

- Supplier payable/open items must exist.
- Payment cash/bank source must be valid.
- Accounting period must be open for posting.

Typical user steps

1. Create payment.
2. Select supplier and payment source.
3. Enter date/amount.
4. Allocate to open payable items.
5. Submit/approve.
6. Post.

Related modules

- Supplier Invoices
- Supplier Debit Notes
- Accounts Payable
- Treasury/Bank
- General Ledger

Common issues / what to check

Invoice not available for allocation

Check supplier, branch, open balance and status.

Allocation rejected

Do not allocate above remaining open payable amount.

Cannot post

Check approval, accounting period and payment account setup.

9.17. Sales Orders

Item	Details
Menu path	Operations > Sales > Sales Orders
Purpose	Records customer demand and starts the sales fulfillment flow.

Before you use it

- Customer and product must be active/eligible.
- Correct branch and warehouse/product settings must exist.

Typical user steps

1. Create Sales Order.
2. Select customer/branch.
3. Add products and quantities/prices/discount/tax.
4. Save Draft.
5. Submit/approve.
6. Allocate stock.

Related modules

- Customers
- Products
- Stock Allocation
- Dispatches
- Sales Invoices
- AR

Common issues / what to check

Product missing

Check product sellable/branch/location setup.

Cannot allocate

Check warehouse stock and existing reservations.

Approval button missing

Check permission and document status.

9.18. Dispatches

Item	Details
Menu path	Operations > Sales > Dispatches
Purpose	Records goods leaving the warehouse for a customer.

Before you use it

- Sales Order/allocation must provide dispatchable quantity.
- Warehouse stock must be available.

Typical user steps

1. Create Dispatch.
2. Select eligible order/allocation.
3. Confirm warehouse and quantities.
4. Enter delivery information.
5. Post/confirm.

Related modules

- Sales Orders

- Stock Allocation
- Inventory
- Sales Invoices

Common issues / what to check

Cannot dispatch quantity

Check available allocated quantity and stock.

Stock did not reduce

Confirm the dispatch reached the posting step.

9.19. Sales Invoices

Item	Details
Menu path	Operations > Sales > Sales Invoices
Purpose	Bills customers and creates Accounts Receivable when posted.

Before you use it

- Customer/source sales workflow must be valid.
- Accounting period must be open.

Typical user steps

1. Create/generate invoice.
2. Verify customer/source/quantities/pricing/tax.
3. Save.
4. Post according to permission/workflow.

Related modules

- Dispatches
- Sales Orders
- Accounts Receivable
- Customer Receipts
- General Ledger

Common issues / what to check

Cannot post

Check accounting period and source/status.

Customer balance unexpected

Review invoice posting and later receipts/credits/applications.

9.20. Customer Receipts

Item	Details
Menu path	Operations > Sales > Customer Receipts
Purpose	Records money received and settles customer open receivables.

Before you use it

- Open receivables should exist unless unapplied receipt is supported.
- Receiving cash/bank account must be valid.

Typical user steps

1. Create receipt.
2. Select customer and receiving account.
3. Enter date/amount.
4. Allocate to customer open items.
5. Submit/approve.
6. Post.

Related modules

- Sales Invoices
- Accounts Receivable
- Treasury/Bank
- General Ledger

Common issues / what to check

Invoice not available

Check same customer/branch and remaining open amount.

Allocation rejected

Do not allocate above the remaining receivable or across customers.

9.21. Sales Returns / Customer Credits

Item	Details
Menu path	Operations > Sales > Sales Returns / Customer Credits
Purpose	Handles returned goods and customer credit generated by supported workflows.

Before you use it

- Original sale/source quantity/value should be eligible.

Typical user steps

1. Create return/credit from correct source.
2. Enter eligible quantities/amounts.
3. Approve/post.
4. Use Customer Credits/Credit Applications/Refunds as required.

Related modules

- Dispatches
- Sales Invoices
- Inventory
- Customer Credits
- Credit Applications

- Refunds
- AR

Common issues / what to check

Return not allowed

Check source transaction and remaining returnable quantity.

Credit cannot be used

Check credit status, customer ownership and available balance.

9.22. Credit Applications

Item	Details
Menu path	Operations > Sales > Credit Applications
Purpose	Applies available customer credit against an open receivable.

Before you use it

- Customer credit and receivable must belong to the same customer and valid scope.

Typical user steps

1. Select customer.
2. Select available credit.
3. Select open receivable.
4. Enter application amount.
5. Submit/approve/post according to workflow.

Related modules

- Customer Credits
- Sales Invoices
- Accounts Receivable

Common issues / what to check

Open invoice/credit missing

Check customer, branch, posting status and remaining balance.

Amount rejected

Cannot apply more than available credit or receivable.

9.23. Customer Refunds

Item	Details
Menu path	Operations > Sales > Customer Refunds
Purpose	Returns money to a customer from eligible customer credit/open item.

Before you use it

- Eligible refundable credit/open item must exist.
- Refund cash/bank source must be valid.

Typical user steps

1. Create refund.
2. Select customer and eligible credit.
3. Choose refund account.
4. Enter amount.
5. Approve/post.

Related modules

- Customer Credits
- Accounts Receivable
- Treasury/Bank
- General Ledger

Common issues / what to check

Credit not available

Check remaining credit and customer ownership.

Cannot post

Check approval, accounting period and refund account.

9.24. AR Adjustments

Item	Details
Menu path	Operations > Sales > AR Adjustments
Purpose	Authorized corrections/write-offs to Accounts Receivable.

Before you use it

- Use supporting documentation and approval.

Typical user steps

1. Create adjustment.
2. Select customer/source where applicable.
3. Enter approved adjustment.
4. Submit/approve/post.

Related modules

- Accounts Receivable
- Customer balances
- General Ledger

Common issues / what to check

Adjustment cannot post

Check approval and accounting period.

Balance still wrong

Investigate source open items before creating another adjustment.

Important notes

- Do not use AR Adjustments simply to force a balance to match an expected number.

9.25. Inventory - Stock Summary / Ledger

Item	Details
Menu path	Operations > Inventory > Stock Summary / Stock Ledger
Purpose	Shows current stock and the movement history that explains it.

Before you use it

- Select correct warehouse/branch/date filters.

Typical user steps

1. Open Stock Summary for current quantities.
2. Open Stock Ledger to investigate movements.
3. Trace unexpected balances to source documents.

Related modules

- Goods Receipts
- Dispatches
- Returns
- Transfers
- Adjustments
- Stock Counts

Common issues / what to check

Balance seems wrong

Use Stock Ledger to trace source movements.

Wrong warehouse quantity

Check warehouse filter and source transaction warehouse.

9.26. Inventory - Transfers / Adjustments / Stock Counts

Item	Details
Menu path	Operations > Inventory
Purpose	Controls non-sales/non-purchase stock movement and controlled corrections/counts.

Before you use it

- Advanced inventory feature and appropriate permissions may be required.

Typical user steps

1. Use Transfer to move stock between warehouses.
2. Use Adjustment only for authorized corrections.
3. Use Stock Count for physical count process.
4. Post/complete according to workflow.

Related modules

- Stock Summary
- Stock Ledger
- Warehouses
- General Ledger where applicable

Common issues / what to check

Menu missing

Check inventory.module + inventory.advanced SaaS features and permission.

Adjustment rejected

Check stock rules, warehouse and authorization.

9.27. Treasury

Item	Details
Menu path	Operations > Treasury
Purpose	Manages cash/bank transfers, adjustments, bank statements and reconciliation.

Before you use it

- Treasury SaaS feature and permissions must be enabled.
- Cash/bank accounts must be correctly configured.

Typical user steps

1. Use Treasury Dashboard/Register for overview.
2. Create Transfers/Adjustments when authorized.
3. Import/review Bank Statements.
4. Create Bank Reconciliation and match ERP transactions.
5. Complete reconciliation only when differences are resolved.

Related modules

- Supplier Payments
- Customer Receipts
- General Ledger
- Bank Reconciliation
- Financial Reports

Common issues / what to check

Transaction missing from reconciliation

Check account, date, posting status and whether already matched/ignored.

Difference remains

Investigate unmatched bank or ERP entries before completing.

9.28. Accounts Payable Reports

Item	Details
Menu path	Reports > Accounts Payable
Purpose	Shows supplier aging and supplier statements.

Before you use it

- Supplier invoices/payments must be posted correctly.

Typical user steps

1. Open AP Aging for overdue/current buckets.
2. Open Supplier Statement for supplier transaction detail.
3. Apply branch/date/supplier filters carefully.

Related modules

- Supplier Invoices
- Supplier Payments
- Supplier Debit Notes
- Purchase Returns

Common issues / what to check

Balance differs from expectation

Check report date/filters and source open items/allocations.

9.29. Accounts Receivable Reports

Item	Details
Menu path	Reports > Accounts Receivable
Purpose	Shows AR Aging, Customer Statement, Open Invoices and Overdue Invoices.

Before you use it

- Sales invoices/receipts/credits must be posted correctly.

Typical user steps

1. Choose report.
2. Set date/branch/customer filters.
3. Review open/overdue balances.
4. Trace discrepancies to source transactions.

Related modules

- Sales Invoices
- Customer Receipts
- Credits
- Applications
- Refunds
- AR Adjustments

Common issues / what to check

Customer balance differs

Check report filters and open item settlements before assuming an error.

9.30. Financial Control / Financial Statements

Item	Details
Menu path	Reports > Financial Control
Purpose	Provides control dashboard, Trial Balance, Profit and Loss, Balance Sheet, Cash Flow and reconciliations.

Before you use it

- Financial Accounting SaaS feature and appropriate permissions.
- Transactions should be posted and accounting periods managed.

Typical user steps

1. Choose report.
2. Set branch/date period.
3. Run/review report.
4. Trace unexpected figures to GL/source transaction.

Related modules

- General Ledger
- Accounting Periods
- AP
- AR
- Treasury
- Inventory accounting

Common issues / what to check

Report appears wrong

Check dates, branch scope, posting status and source transactions.

Trial Balance issue

Investigate GL entries; never edit posted journals directly.

9.31. Management Reports

Item	Details
Menu path	Reports > Management

Item	Details
Purpose	Provides executive KPIs, budgets, profitability, spend, gross margin, scheduled reports and readiness checks.

Before you use it

- Management Reporting SaaS feature and permissions.
- Underlying operational/financial data should be posted and complete.

Typical user steps

1. Choose required report.
2. Set period/scope/filter.
3. Review KPIs and drill into source modules when numbers need explanation.

Related modules

- Sales
- Purchasing
- Inventory
- Financial Control
- Budgets

Common issues / what to check

Menu missing

Check management_reporting.module and permission.

Numbers seem incomplete

Check source transaction status/date/branch and whether data is posted.

9.32. Exports / Notifications / Audit Logs

Item	Details
Menu path	Administration
Purpose	Supports export processing, user alerts and audit traceability.

Before you use it

- Permissions/features vary by area.

Typical user steps

1. Use Exports for queued/large exports and download completed files.
2. Use Notifications as alerts, then open the source module.
3. Use Audit Logs to trace who performed important actions.

Related modules

- All operational modules

Common issues / what to check

Export stuck/failed

Check Export status; report repeated failures rather than submitting many duplicates.

No notification

Notifications are not a replacement for checking the source workflow.

Need to know who changed something

Check Audit Logs with appropriate permission.

10. Role-Based Daily Checklists

10.1 Purchasing

- Draft POs needing completion
- POs submitted and waiting approval
- Approved POs awaiting receipt
- Expected delivery dates
- Supplier invoice matching issues
- Purchase returns awaiting action

10.2 Warehouse

- Expected Goods Receipts
- Receipts awaiting posting
- Dispatches awaiting fulfillment
- Stock shortages/negative-risk situations
- Purchase/Sales returns
- Stock transfer/count/adjustment tasks
- Stock Ledger anomalies

10.3 Finance / AP / AR

- Supplier invoices/payments awaiting approval/posting
- Customer invoices/receipts awaiting posting
- Unapplied/open items
- AP/AR aging
- Bank reconciliation differences
- Accounting period status
- GL/financial control exceptions

10.4 Administrator

- User status and permissions
- Branch access
- New branch prerequisites
- Document Numbering coverage
- Accounting period setup
- SaaS plan/module entitlement
- Failed Jobs / Operations health
- Backups and audit logs

11. Before You Submit / Approve / Post Any Transaction

Check	Question
1	Correct company/tenant?
2	Correct branch?
3	Correct warehouse?
4	Correct customer/supplier?
5	Correct products and units?
6	Correct quantity?
7	Correct prices/discount/tax?
8	Correct date and open accounting period?
9	Correct document numbering sequence available if this action allocates a number?
10	Correct approval status and permission?
11	For stock movement: enough eligible stock/quantity?
12	Supporting reference/notes attached or entered where required?

12. How to Report an ERP Issue Clearly

Good issue reports are faster to solve

Do not report only “not working.” Include the screen, action, branch, document status, exact error and what you expected.

Item	Details
Menu path	Example: Operations > Procurement > Purchase Orders
Record	Example: Purchase Order ID 1 / draft
Action	Example: Submit for Approval
Branch / Warehouse	Dhaka Central Branch / Warehouse 1
Exact message	No active document-number sequence is configured for this document type and branch.
Expected result	PO should receive official number and become Submitted.
What was checked	Document Numbering for Purchase Order + branch, permissions, status.
Screenshot / log	Attach the visible error or first relevant stack trace.

13. Short Glossary

Term	Meaning
AP	Accounts Payable - money owed to suppliers.
AR	Accounts Receivable - money customers owe the company.
PO	Purchase Order.
GRN / Goods Receipt	Record of physically received purchased goods.
SO	Sales Order.
Dispatch	Record of goods leaving warehouse.
Open Item	Unsettled amount waiting for receipt/payment/credit application.
Allocation	Reservation or settlement assignment, depending on module.
Posting	Final step that commits accounting/inventory impact.
Reversal	Controlled correction of a posted transaction.
Tenant	Separate company/business data boundary.
Branch	Operating location/business unit.
Warehouse	Stock-holding location under a branch.
SaaS entitlement	Plan feature/limit that controls module availability.
Document sequence	Rule used to generate official document numbers.

14. Guide Scope and Maintenance

- This guide reflects the current ERP menu structure and workflows available in the project snapshot reviewed in August 2026, plus the current manual-testing findings addressed during this ERP project session.
- Exact fields and available buttons can vary by role, branch access, transaction status and SaaS plan.
- When the ERP is changed (new module, new workflow, renamed menu, new validation), update this guide at the same time.
- For a final production release, regenerate this guide from the latest authoritative project ZIP after all manual acceptance testing is complete.

Recommended ownership

Keep one approved PDF for users and one editable DOCX controlled by the ERP administrator/project owner. Update the version/date whenever workflows change.
